

MECHANICAL DESIGN- BUILD CONSTRUCTION

- » Professional engineering staff
- » Full mechanical (HVAC & plumbing, specialty systems)
- » LEED® accredited professionals
- » Value-based project delivery

DELIVERING ON THE VALUE PROPOSITION

When working with clients to design and build mechanical systems for their new or renovated facilities, we understand that expectations are high. The challenge is to meet project goals while providing a cost-effective and functional facility.

Our solutions are comprehensive and practical because we have proven methodologies for design and construction on a wide variety of projects. We know what works, and we bring our collective knowledge, best practices, and personal commitment to assure that your expectations are met and exceeded.

Customized solutions for exceptional results

When you get mechanical solutions that are customized to your unique goals for the project, you are ensured of an efficient system, designed to provide results with no wasted dollars.

A willingness to listen and the ability to deliver

Others may possess the technical skills required for your projects, but lack the ability to listen, to uncover accurate and complete information, to guide discussions, and to explore ideas with team members. Our Design-Build staff is accomplished at listening, interpreting needs and resolving issues so that the end product effectively meets the user's needs from a holistic viewpoint – function, quality, cost, and longevity

Depth of organization and resources

Hermanson can leverage the expertise available throughout our organization – offering only the best in mechanical design and construction teams for your projects. We have the expertise to manage all aspects of mechanical systems design and construction, assuring total control and great outcomes for your projects.

“The design-build project was professionally handled in all phases...Your company’s flexibility with schedules and scope produced a product that operates efficiently and achieved and exceeded our specifications and expectations. We can highly recommend Hermanson Company; we feel you brought the best to our project”

HERMANSON

Committed to Design-Build Excellence

Since 1979, Hermanson has assisted building owners and tenants with the design and installation of mechanical systems that meet their unique facility needs. During the past decade, our Design-Build capabilities have grown with proven success – resulting in mechanical design and construction of over 1,800 projects with a total mechanical value in excess of \$230 million.

Our Design-Build team includes Professional Engineers, Mechanical Designers and CADD Technicians, along with Project Managers and Field Superintendents who specialize in the Design-Build process. Our team brings the highest level of professionalism, integrity, creativity and competitiveness to their projects, and our experience assures you of competent, appropriate designs. You can count on us as your team member.

Hermanson’s commitment is to excel beyond your expectations by thinking, listening and acting in the project’s best interest.
