QUALITY AND SERVICE

Through our over 30 years of service to the region's construction community, Hermanson's focus has been on providing our clients with the absolute best in mechanical construction – whether for a \$5,000 tenant improvement or for a \$200 million new hospital – assuring that our clients receive the highest value and quality.

The mechanical construction industry has always been a hands-on, labor intensive operation. Today it is still hands-on, but in a very different way. Hermanson has successfully blended the best of the old with today's technology to provide superior service and products.

As a leading mechanical contractor in the Pacific Northwest, Hermanson offers a comprehensive suite of mechanical construction services. Our goal is to bring to our clients the best of both worlds – state-of-the-art

technology and good old-fashioned hard work - to exceed, our clients' expectations. To achieve this, we emphasize a set of fundamental values that guide our daily work:

Attitude drives everything

Our primary attitude can be summed up in one word – “Care.” When we care about our customers, our business partners, ourselves and our community, quality and value naturally follow.

Common sense counts

Real solutions solve real problems, and the best solutions are usually the simple ones. We keep this in mind while unraveling the inevitable challenges and approaching the opportunities of the construction business.

Bring value / build relationships

We strive to deliver on our promises with timely, first rate service that helps our customers achieve their goals. This is reflected in our commitment to LEAN construction practices.

“Hermanson Company is an exceptional organization in many ways. You and your staff should be proud of the company you have built!”

HERMANSON

Mechanical Construction Excellence

Since 1979, Hermanson has successfully completed mechanical construction for projects ranging from complex biotechnology and healthcare facilities to large, challenging renovations, to new commercial construction for a variety of uses. Our capabilities include MEP Coordination / BIM Modeling, automated HVAC sheet metal fabrication and field installation, plumbing & piping fabrication and installation, and comprehensive commissioning services.

We use the latest technology for project coordination and can assist our clients' construction and facilities management process through the services of the Project Knowledge Center[®]. With computerized estimating, load analysis, and fabrication equipment, we price projects quickly and accurately, and consistently help our clients realize maximum cost effectiveness. In the final analysis, however, it is our people that set us apart. Our crews are experienced and dedicated – and determined to bring the best to each project.
