STATE-OF-THE-ART

In Hermanson's state-of-the-art 32,000 s.f. sheet metal shop skilled craftsmen produce a wide range of products from massive duct systems to unique specialty items. Working in stainless steel, galvanized steel, copper and aluminum, our Specialty Metals team has designed and built distinctive items customized for our clients. From trophy cases to custom kitchen hoods, from hospital door kick-plates to stair rails, from stainless countertops to a baptismal fount, if you can imagine it in metal, our Specialty Metals team can build it.

Count on comfort

“I wanted you to know how much we appreciated the hard work and professional attitude that you and your employees brought to the project. The teamwork and determination to hold to the schedule and keep the quality level high showed in the finished product. (Restaurant) personnel remarked that it was one of the smoothest and most professionally staffed projects they had ever seen!”

JIM BRAY,
RBI Construction

HERMANSON

Cost Effective Creativity

Hermanson's genesis was as a Sheet Metal contractor. Since 1979, our crews have impressed general contractors and building owners alike with the cost efficiency and quality of our installations. Because our customers often have metal fabrication needs that are particular to their specific project, the Specialty Metals group was formed to create these unusual and often beautiful items.

In our state-of-the-art fabrication shop, we have designed and built a wide variety of specialty items for clients ranging from the Federal government to small churches. Our workforce is well-trained and dedicated to excellence; our entire staff is experienced, creative and committed. And, because we understand the rigors of the construction world, we work closely with our clients to provide Specialty Metal fabrication that not only meets the need, but also fits the budget.
